

Members

TACTICS has assembled a strong multidisciplinary team of preclinical and clinical top researchers, both from academia and SMEs. The expertise of the team encompasses the range of skills required to deliver a program of research that provides access to a number of unique animal models and integrated DNA x MRI clinical and control cohorts. Drawn from different EU member states, cultures and backgrounds all of the members work together towards a common goal.

The coordinators of the TACTICS project are Prof. Dr. Jan Buitelaar and Dr. Jeffrey Glennon from Radboud University Nijmegen Medical Centre, Donders Institute of Brain, Cognition and Behavior, the Netherlands.
